

Théo LAMBERT, Software Engineer

Arras, Hauts-de-France, France

contact@theolambert.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Software Engineer, I turn complex business problems into robust and maintainable systems while avoiding over-engineering. With experience primarily gained in developing business-critical .NET applications, I have a particular interest in backend development, infrastructure, and the Go ecosystem.

Skills

Backend Go, .NET, REST APIs
Infrastructure Docker, Kubernetes, CI/CD
Tools Git, Neovim, Tmux
Languages French (native) • English (C1)

Frontend Angular, React, Playwright
Databases PostgreSQL, MariaDB, SQL Server
Practices TDD, Software Craftsmanship, Agile

Experience

Software Engineer

November 2024–Present

[Ordre National des Infirmiers](#) — Arras, Hauts-de-France

- Development and evolution of the establishments portal used by approximately 10,000 healthcare organizations for quarterly regulatory reporting of nurses; implementation of backend and frontend features ensuring legal compliance and identification of unregistered professionals (**.NET, Go, Angular**)
- Migration of several dozen UIPath test scenarios to **Playwright**, using a spec-driven approach assisted by AI agents, resulting in more than **€56k per year** in license cost savings
- Design and implementation of a **Kubernetes prototype cluster (RKE2, Rancher, Longhorn, Harbor)** across 5 VMs to evaluate the industrialization of containerized deployments
- Led an internal **RGAA accessibility audit**, mitigating legal risks related to accessibility compliance

Software Engineer

November 2022–October 2024

[Sumit](#) — Villeneuve d'Ascq, Hauts-de-France

- Modernization of a 2003 WinForms ERP into a web application built with **.NET and Angular**, used daily by business teams
- Development of **complex business features** around contract management, pricing rules, and multi-actor workflows; with immutable state management and automated E2E testing using Playwright
- Contributed to architectural decisions and validated technical directions through prototyping

Software Engineer — Project Manager

September 2019–October 2022

[Enedis](#) — Lille, Hauts-de-France

- Industrialization of an award-winning internal innovation POC based on a BERT NLP model used to identify unnecessary technical interventions, generating estimated savings of several million euros per year (**Symfony, Angular, Python**)
- Industrialized deployments using **GitLab CI and Kubernetes**, replacing a previously manual deployment process
- Development of an internal application used to track the activities of 140 business experts, featuring **modular KPI dashboards**

Studio Owner — Audio Engineering

2014–2021

Hauts-de-France

- Ran an independent audio studio: client relations, project management, and digital audio systems design.

Projects

[Kelmot.net](#) — Multiplayer Word Game (Go, PostgreSQL, React)

2026

- Multiplayer web application developed with Go and React
- OAuth, matchmaking, ELO ranking, real-time notifications, and user account management (trophies, history, contacts...)

[Voyage](#) / [Voyage.nvim](#) — CLI + Neovim Plugin (Go, Lua)

June 2026

- Open-source tool for exploring markdown note graphs through wikilinks in the terminal, alongside a dedicated Neovim plugin

[Scretch.nvim](#) — Neovim Plugin (Lua)

April 2023

- Open-source Neovim plugin for managing temporary scratch files

Education

CESI Lille - Master's Degree — Architecture and Software Applications of Information Systems (RNCP Level 7) 2022–2024

Interests

Padel • Running • Music (guitar, bass, recording) • Motorcycles
