

Théo LAMBERT

Software Engineer

Arras, Hauts-de-France, France • contact@theolambert.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Full-stack software engineer with a strong focus on backend and infrastructure. I work across the entire development lifecycle with a strong emphasis on quality and maintainability. My experience is primarily based on .NET environments, and I am now transitioning toward the Go ecosystem, as I believe its simplicity, built-in concurrency model, and explicit error handling improve readability and robustness of backend services.

Skills

Backend	Go, .NET
Frontend	TypeScript, Angular, React
Infrastructure	Docker, Kubernetes (RKE2), CI/CD
Databases	PostgreSQL, MariaDB, SQL Server
Tools	Git, GitHub, GitLab, Azure DevOps, Linux, Neovim, Tmux
Practices	TDD, Software Craftsmanship, Agile
Languages	French (native) • English (C1)

Experience

Full-stack Developer

November 2024–Present

Ordre National des Infirmiers — Arras, Hauts-de-France

- Development and evolution of the establishments portal used by approximately 10,000 healthcare organizations for quarterly regulatory reporting of nurses; implementation of backend and frontend features ensuring legal compliance and identification of unregistered professionals (.NET, Go, Angular)
- Migration of the CI/CD pipeline during transition to HDS-certified hosting: installation and configuration of Jenkins on Windows Server, recovery of existing pipelines (build and deployment across 4 environments) and restoration of delivery processes without downtime
- Design and implementation of a Kubernetes cluster (RKE2, Rancher, Longhorn, Harbor) across 5 VMs as a POC, enabling evaluation of container orchestration and improving developer autonomy
- Led an RGAA (accessibility) audit of an internal application and defined a multi-year compliance plan, securing regulatory requirements and reducing legal risks

Software Developer

November 2022–October 2024

Sumit — Villeneuve d'Ascq, Hauts-de-France

- Modernization of a legacy WinForms ERP (2003) into a scalable web application, significantly reducing technical debt and improving performance and user experience (.NET, Angular)
- Development of complex business features (contracts, pricing rules, multi-actor workflows), improving reliability and reducing operational errors
- Implementation of immutable state management and end-to-end test automation (Playwright), improving debugging efficiency and reducing regressions
- Contributed to architectural decisions through prototyping, resulting in a robust, maintainable solution successfully adopted by end users

Software Developer — Project Manager
Enedis — Lille, Hauts-de-France

September 2019–October 2022

Industrialization of an intervention analysis POC

September 2021–October 2022

- Industrialization of an award-winning internal innovation POC based on an NLP model (BERT) to identify unnecessary technical interventions; deployment as a national application integrated into the IS, generating estimated savings of several million euros per year (Symfony, Angular, Python)
- Production deployment through containerization, CI/CD (GitLab CI) and Kubernetes, improving deployment reliability and reproducibility
- Modernization of the internal framework (Symfony, Angular) toward a reusable component-based architecture and organized a hackathon (30 developers), increasing adoption and enriching the internal ecosystem

Development and maintenance of internal applications

September 2019–August 2021

- Development of an internal application for tracking expert activities: improved UX/UI and implementation of modular dashboards enabling KPI-driven operational monitoring and better visibility of activities
- Mentored developers and supported onboarding, accelerating skill development and team integration

Studio Owner — Audio Engineering
Hauts-de-France

2014–2021

- Managed and developed an audio production studio (client projects, music production)
- Designed and deployed digital audio networks
- Project management, client relations and training

Education

CESI Lille

- Master's Degree — Architecture and Software Applications of Information Systems (RNCP Level 7) 2022–2024

Projects

Kelmot.net — Multiplayer word game (Go, React) [\[site\]](#)

2026

- Word guessing game inspired by Motus with a retro Windows XP-style interface
- Solo mode, private rooms and competitive matchmaking with ELO ranking
- User accounts (OAuth), trophies, contacts and notifications

Tipimock — API mock platform (Go, React) [\[demo\]](#)

Jan 2026

- API mocking platform with dashboard for testing workflows involving email sending

Scratch.nvim — Neovim plugin (Lua) [\[github\]](#)

April 2023

- Open-source Neovim plugin for managing temporary “scratch” files

Babyfoot Lille Métropole — Web application (SvelteKit) [\[audit\]](#)

March 2023

- Order management application for a foosball club
- Pro bono project

Cedar — TypeScript CLI [\[github\]](#)

April 2022–December 2022

- Open-source CLI for generating NFTs on Solana (Metaplex standard)

Interests

Padel • Running • Music (guitar, bass, recording) • Motorcycles (road trips)
